                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, analogosists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastoccelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. AAU86128-AAU86162 represent the human PRO polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Thirty five nucleic acids encoding PRO polypeptides, useful for treating benign or malignant tumours, leukaemias and lymphoid malignancies, inflammatory, anglogenic and immunologic disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Watanabe CK,

The method of the invention involves administering to the mammal a tumour necrosis factor-related activation induced cytokine (TRANCE) modulating agent. The method is useful for treating a mammal CC having a disorder comprising insufficient or excessive cartilage or CC skeletal growth, where the disorder comprising insufficient cartilage or CC craniofacial skeletal discrepancies and bone or cartilage activation from traumatic injury, surgery, osteoarthritis or rheumatoid CC excessiving from traumatic injury, surgery, osteoarthritis or rheumatoid CC exostosis bursate and multiple osteoarthritis, and disorders comprising excessive cartilage or skeletal cc is useful for inhibiting chondrocyte differentiation. The present amino CC acid sequence represents the human TRANCE protein, splice variant 2, of the invention. TRANCE is a member of the tumour necrosis factor family

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents an osteoclastogenesis inhibitory factor (CCIF)-binding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone. CC absorption factors such as calcitriol or parathyroid hormone (PTH). CC absorption factor by separation and solubilisation of membrane proteins cC then affinity chromatography using OCIF. It exists in a full-sequence cC used for screening potential inhibitors and modifiers of its biological function and screening for receptors to OBM which mediate its function. CC These substances can then be used in the treatment of disorders of bone cC function and calcium metabolism. The antibodies can be used for assay commonents of drings.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences, e.g. screening for related sequences, also to produce requences, e.g. screening for related sequences, also to produce transgenic animal models, while complementary sequences are used for antisense regulation of OpG binding protein expression. Modulators of antisense regulation of OpG binding protein protein, particularly soluble forms of OpG binding protein opG binding protein, particularly soluble forms of OpG binding protein or Ab, are used to treat or prevent bone diseases, e.g. osteoporosis, or Ab, are used by arthritis or metastases, hypercalcaemia, Paget's bone loss caused by arthritis or metastases, hypercalcaemia, Paget's disease, periodontal disease, osteoporosis, loosening of prostheses, optionally in combination with agents that promote bone growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   detection of OPG binding protein) and to identify compounds that modulate binding of OPG binding protein to osteoclast differentiation and activation receptor (ODAR). The nucleic acid molecule encoding OPG binding protein can be used to detect OPG binding protein-encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

The present sequence represents an osteoclastogenesis inhibitory factor (OCIF)-binding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). By its isolated from stroma cells cultured in the presence of a bone obm is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins

These substances can then be used in the treatment of disorders of bone function and calcium metabolism. The antibodies can be used for assay of the protein, for investigative and diagnostic purposes, and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     components of drugs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-OCT-1998 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RANKL; RANK ligand; tumour necrosis factor; TNF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RANK; necrosis factor-kappa B; NF-kB; receptor activator; human;
          This represents a human RANKL, a ligand for the RANK (receptor activator of necrosis factor kappaB (NF kB)) polypeptide. RANK is a activator of the tumour necrosis factor (TNF) family. A soluble RANK member of the tumour necrosis factor (TNF) family. A soluble RANK member of the tumour necrosis factor (TNF) family. A soluble RANK cell may be used for inhibiting activation of NF kB, by contacting a cell may ligand (RANKL). RANKL polypeptides can activate RANK and can be RANK ligand (RANKL). RANKL polypeptides can activate RANK and can be used to induce maturation of dendritic cells and enhance their least of the composition of the self or regulating an immune response. The allo-stimulatory capacity, thereby augmenting an immune response. The soluble RANK polypeptide composition may also be used for regulating an soluble RANK polypeptide composition may also be used for regulating and soluble response that result from triggering of RANK, e.g. in treating toxic response that result from triggering of RANK, e.g. in treating toxic response that result from triggering of RANK, e.g. in treating toxic response and the self-decitions, or acute inflammatory shock or sepsis, graft-versus-host reactions, or acute inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo sapiens

This represents a human RANKL, a ligand for the RANK (receptor activator of necrosis factor kappaB (NF-kB)) polypeptide. RANK is a CC activator of necrosis factor (TNF) family. Host cells transformed the tumour necrosis factor (TNF) family. Host cells transformed CC nucleic acid can be used to produce recombinant RANK protein. The soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell CC expressing membrane-associated RANK with a soluble RANK which binds to CC used for regulating an immune or inflammatory response. Inhibition of CC NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in CC inflammatory reactions. They can also be used in adjunct therapy for consists can also be used in adjunct therapy for can also be used in adjunct the products

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NF-kB receptor activator RANK ligand (RANKL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-OCT-1998 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW68293
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW68293 standard; Protein; 317 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                characterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of an inflammatory response, and also for protecting RANK-expressing cells from the negative effects of chemotherapy or the presence of high levels of manners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of TNF-alpha. The products can also be used for detection and drug

         The present sequence represents a human osteoprotegerin ligand (OPGL). Osteoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoplastogenesis in a dose dependent protein. The OPGL protein is synthesised as a type II transmembrane is a potent osteoplast differentiation factor when combined with CSF-1. It is not capable of inducing osteoplast differentiation in the absence of CSF-1. OPGL is also an activator of mature osteoplasts. The opglation describes a method for the in vivo down-regulation of DOFL activity in an animal. The method comprises using at least one OPGL an immune response in the animal. The method and OPGL polypeptide are useful for treating, preventing and ameliorating osteoporosis or other alicenses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
Ax The patent discloses novel receptor activator of nuclear factor (NF)-
CC kappab (RANK) proteins and their corresponding DNAS. RANK is a member of the tumour necrosis factor (TMF) receptor superfamily and associates cult TMF receptor associated factor (TMF) receptor superfamily and associated factor (TMF) response. The important contains the receptors of influence and in screening for inhibitors of signal transduction, e.g. for screening the consequence of inhibitors of signal transduction, e.g. for screening the consequence of the inhibit interaction of RANK with TRAF1, TRAF2, TRAF3, consequence that inhibit interaction of RANK with TRAF1, TRAF2, TRAF3, consequence that inhibit interaction of RANK, e.g. in frammatory consequence in a meliorating the negative effects of an inflammatory consequence of the result from triggering of RANK, e.g. in treating toxic consequence in the result from triggering of RANK, e.g. in treating toxic consequence in the result from triggering of RANK, e.g. in treating toxic consequence in the result from triggering of RANK, e.g. in treating toxic consequence in the result of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based consequence of the receptor are used in vivo or in vitro based
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; receptor activator of nuclear factor kappaB ligand; RANKL; NF; tumour necrosis factor; TNF; TNF receptor associated factor; TRAF; tumour necrosis inflammatory response; graft-versus-host reaction; immune response; inflammatory reaction; bone resorption; toxic shock; sepsis; acute inflammatory reaction; bone resorption; anti-apoptotic signal; therapy; immunosuppressant; anti-inflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAE08738 standard; Protein; 317 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human receptor activator of NF kappaB ligand (RANKL) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAE08738;

RANK compositions are used in the development of both agonistic and antagonistic antibodies, or as an adjunct therapy for disease characterised by neoplastic cells that express RANK. Compounds that interfere with RANK/TRAF6 interactions are useful for modulating the formation of osteoclasts from osteoclast express and for modulating osteoclast function and activities. They are used as inhibitors of diseases associated with excess bone resorption and as immunosuppressants or anti-inflammatory agents. The RANK DNAs are used as inhibitors of anti-inflammatory agents. The proteins are useful for the expression of recombinant proteins, as probes for analysis useful for the expression of recombinant proteins, while the proteins of the presence or distribution of RANK transcripts, while the proteins are useful in preparing kits for the detection of soluble RANK, or are useful in preparing kits for the detection of soluble RANK ligand monitor RANK-related activity. The present sequence is RANK ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (RANKL) protein from human.

                                                                                                                                                                                                                                                                                             (IMMV ) IMMUNEX CORP.
                                                                                                                                     New DNA molecules, useful for producing ligands (which are useful for regulating immune response and in screening for inhibitors of NF-chi B receptor activator) of the receptor activator of NF-chi B (RANK)
                                                                                                                                                                                                          WPI; 2001-407216/43.
N-PSDB; AAD08715.
The present invention relates to receptor activator of NF-chi B (RANK) to DNA. RANK is mapped to chromosome 18q22.1 and its ligand (RANKL) to Chromosome 13q14. RANK and RANKL are type 1 and type 2 transmembrane proteins respectively. RANK is a member of the tumour necrosis factor (TNF) superfamily and it closely resembles CD40 in the extracellular
                                                                                                                                                                                                                                                             Anderson DM

The present invention relates to a novel receptor, referred to as RANK (receptor activator of NF (nuclear factor) *KappaB), a member of TNF (tumour necrosis factor) receptor superfamily RANK is a Type I can be received in that interacts with TNF receptor associated factors (TRAFS). Triggering of RANK by overexpression or co-expression or co-exp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAE01993

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    region, RANK associates with TNF receptor-associated factor (TRAF) 2 and TRAF3. The DNA molecules are useful for producing ligands of RANK. The ligands are useful for regulating immune response and in screening for inhibitors of RANK. The present sequence is human RANKL (huRANKL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3 AHKTSLSSWKHDQDWANVSNMTFSNGKLRVK--GIYYRNADICSRHRVTSAGLTLQDLQL 60

The invention relates to treating an individual at risk for or suffering CC from infection with a pathogenic or opportunistic organism. The method CC involves administering a combination of two to five agents. The method CC agent; (c) dendritic cell mobilisation factor; (b) dendritic cell medicisation agent; (d) Tell administering for treating an individual at risk for or suffering from infection with a CC pathogenic or opportunistic organism, e.g. viruses (e.g. HIV), bacteria CC (e.g. M. tuberculosis), yeast, fungi (e.g. C. albicans) or protozoa (e.g. cc useful for treating an individual strikk for or suffering from infection with a CC (e.g. which causes Chaga's disease). The methods are useful for CC centancing a lymphocyte-mediated immune response. In particular, the CC method is useful for treating inflammations, chickenpox, oral or genital CC dendritic cells are useful as a vaccine adjuvant. The presenting cepresents a human RANKL polypeptide fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABB08134

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     are produced by alternative splicing.

TISSUE SPECIFICITY: HIGHEST IN THE PERIPHERAL LYMPH NODES BUT
PLACENTA, PERIPHERAL BLOOD LEUKOCYTES, BONE MARROW, HEART,
PLACENTA, SKELETAL MUSCLE, STOMACH AND THYROID.

INDUCTION: UPREGULATED BY T CELL RECEPTOR STIMULATION.

PTM: The soluble form of isoform 1 derives from the membrane for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hypercalcenia of malignancy.

SUBUNIT: Homotrimer (By similarity).

SUBCELLULAR LOCATION: Type II membrane protein (isoforms 1 and 3);

Secreted (isoform 2). A soluble form of isoform 1 arises by

Proteolytic processing (By similarity).

ALTERNATIVE PRODUCTS: 3 isoforms; 1 (shown here), 2/SODF and 3;

V. Velikodvorskaja G.A.;

"Cloning the Clostridium thermocellum thermostable laminarinase gene in Escherichia coli; the properties of the enzyme thus produced.";

in Escherichia (12:811-816(1990)).

-i- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages in beta-D-glucans containing 1,3- and 1,4-bonds.

-i- SUBUNIT: MAY FORM PART OF A MULTIENZYME COMPLEX (CELLULOSOME).

WELL AS IN OTHER C.THERMOCELLUM CELLULOSOME INTHIS ENZYME AS MAY FUNCTION AS THE BINDING LIGAND FOR THE SL COMPONENT.

MAY FUNCTION AS THE BINDING LIGAND FOR THE SL COMPONENT.

-i- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (AUG-1993) to the EMBL/GenBank/DDBJ databases

Immunol. Immunopathol. 67:359-372(1999).

FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES THYMOCYTE PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL MATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY. IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING IDENTIFIED AS ENDOGENOUS PYROGENS, AND ARE REPORTED TO STIMULATE THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: BELONGS TO THE IL-1 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                   180.5

No. is the number of results predicted by chance to have a pred. No. is the number of the score of the result being printed, score greater than or equal to the total score distribution. and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides of the PRO polypeptides are useful for diagnostic acids of the PRO polypeptides are useful for diagnosting tumours, especially lunguary the properties are useful for diagnosting tumours, respectively consisteration of, or gene expression, in pericyte cells, for stimulating or inhibiting the prostate tumour, prostate tumour, rectal tumour or fibroblast cells. The PRO polypeptides is for stimulating the release of tumour necrosis for stimulating the release of tumour necrosis for stimulating the release of tumour necrosis factor alpha from human blood, and in chromosome and gene mapping. The PRO polypeptide are not formal human dermal xxx protein sequences of the invention. ANU83592-ANU83713 represent human probes,

                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a formulation comprising Apo-2 ligand and divalent metal ions. Apo-2 ligand and the formulation are useful for treating cancers and viral infections. Addition of divalent metal ions for making Apo-2 ligand and formulations containing Apo-2 ligand results in increased yield and stability of Apo-2 ligand trimers.

AABO8265-83 represent tumour necrosis factor (TNF) ligands. The specification describes an AGP-3 polypeptide, which is TNF ligand family member. AGP-3 is a type II transmembrane protein, and is a potent B cell stimulatory factor. Expression of AGP-3 correlates to increases in the number of B cells and immunoglobulins produced. AGP-3 proteins, antibodies, and nucleic acids may be used to treat inflammatory and immune disorders, e.g. rheumatoid arthritis, Crohn's disease, lupus and graft versus host disease. The nucleic acids may be used to regulate the expression of an AGP-3 related protein. The AGP-3 proteins, antibodies and nucleic ands are also useful for the detection of AGP-3 agonists, antagonists and characterizing interactions with AGP-3 related proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; PRO; benign tumour; malignant tumour; lymphoid malignancy; leukaemia; neuronal disorder; stromal disorder; blastocoelic disoinflammatory disorder; immune disorder; angiogenic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytostatic; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 14; Fig 9; 71pp; English.

The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and anglogenic disorders. The polynucleotide sequences are also useful in gene therapy. AAU86128-AAU86162 represent the human PRO

resulting from traumatic injury, surgery, osteoarthritis or rheumatoid arthritis, and disorders comprising excessive cartilage or skeletal growth are selected from acromegaly, gigantism, exostosis, carilaginea, exostosis bursata and multiple osteocartilaginous exostoses. The method is useful for inhibiting chondrocyted differentiation. The present amino acid sequence represents the human TRANCE protein, splice variant 2 of the invention. TRANCE is a member of the tumour necrosis factor family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a new method of treating a mammal having a disorder comprising insufficient or excessive cartilage or skeletal growth. The method of the invention involves administering to the mammal a tumour necrosis factor-related activation induced cytokine (TRANCE)-modulating agent. The method is useful for treating a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating mammal having disorder characterised by abnormal cartilage/skeletal growth such as dwarfism, acromegaly, by administering tumour necrosis factor-related activation induced cytokine-modulating agent to mammal
                                                                                                                                                                                                                                                                                                                                                                                              and acts directly on cartilage-producing cells (chondrocytes).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or skeletal growth is selected from dwarfism, osteopetrosis, craniofacial-skeletal discrepancies and bone or cartilage damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     having a disorder comprising insufficient or excessive cartilage or skeletal growth, where the disorder comprising insufficient cartilage
